## CHAPTER 3 <br> Job Costing Systems

## Types of Product-Costing Systems

Used for production of large, unique, high-cost items.

- Built to order rather than mass produced.
$\uparrow$ Many costs can be directly traced to each job.
+TWO TYPES:
-Job-shop operations
-Products manufactured in very low volumes or one at a time.
$\downarrow$ Batch-production operations Multiple products in batches of relatively small quantity.

## Flow of Costs in Manufacturing Firm

## Job-Order System Cost Flows

## Wages Payable <br> -Direct <br> Labor <br> -Indirect <br> Labor

## Mfg. Overhead

-Indirect •Overhead Material Applied to $\qquad$ - Indirect Work in

Labor Process

## Work in Process

(Job-Cost Record)
-Direct
Material
-Direct
Labor

- Overhead Applied

> If actual and applied manufacturing overhead are not equal, a year-end adjustment is required. We will look at the procedure to accomplish this later.

## Actual and Normal Costing

Using a predetermined rate makes it possible to estimate total job costs sooner.

Actual overhead for the period is not known until the end of the period.

## Manufacturing Overhead Costs

Overhead is applied to jobs using a predetermined overhead rate ( POHR ) based on estimates made at the beginning of the accounting period.

| POHR = | 1 Budgeted manufacturing overhead cost |
| :---: | :---: |
|  | Budgeted amount of cost driver (or activity base) |

## Overhead applied $=$ POHR $\times$ Actual activity

Based on estimates, and determined before the period begins

Actual amount of the allocation base, such as direct labor hours, incurred during the period

## Overapplied and Underapplied Manufacturing Overhead - Summary

| If Manufacturing Overhead is | Alternative 1 <br> Allocation | Alternative 2 Close to Cost of Goods Sold |
| :---: | :---: | :---: |
| UNDERAPPLIED <br> (Applied OH is less than actual OH ) | INCREASE <br> Work in Process Finished Goods Cost of Goods Sold | INCREASE <br> Cost of Goods Sold |
| OVERAPPLIED <br> (Applied OH is greater than actual OH ) | DECREASE <br> Work in Process Finished Goods Cost of Goods Sold | DECREASE <br> Cost of Goods Sold |

## Costing Approaches Summarized

| Actual Costing |  |  |
| :--- | :--- | :---: |
| Normal Costing |  |  |
| Indect Costs | Actual direct-cost rates $\times$ | Actual direct-cost rates $\times$ |
|  | actual quantities of direct-cost inputs | actual quantities of direct-cost inputs |
|  | Budgeted indirect-cost rates $\times$ |  |

## Three Methods for Adjusting Over/ Underapplied Overhead

- Adjusted Allocation Rate Approach - all allocations are recalculated with the actual, exact allocation rate.
- Proration Approach - the difference is allocated between Cost of Goods Sold, Work-in-Process, and Finished Goods based on their relative sizes
- Write-Off Approach - the difference is simply written off to Cost of Goods Sold

MinBad Company produces two small engines for model boats (engine $A$ and engine $B$ ). Both products pass through two producing departments. Engine $B$ is by far the more popular of the two engines. The following data have been gathered for these two products (see slides 2 and 3):

## Required:

1. Compute the unit manufacturing product cost for each product using a plant-wide rate based on direct labour hours.
2. Compute the unit manufacturing product cost for each product using depart-mental rates. Use machine hours for department 1 , and direct labour hours for department 2.
3. Compute the unit manufacturing product cost for each product using activity-Based costing.

## Product Data

| Engine A | Engine B |  |
| ---: | ---: | ---: |
| $\$ 30,000$ | 300,000 |  |
| 100,000 | $\$$ | $1,000,000$ |
| 40,000 |  | 400,000 |
| 20,000 | 200,000 |  |
| 40 | 60 |  |
| 800 | 1,200 |  |

Departmental Data

$$
\text { Department } 1 \text { Department } 2
$$

Direct labour Hours:

| Engine A | 30,000 | 10,000 |
| :---: | :---: | :---: |
| Engine B | 45,000 | 355,000 |
| Total | 75,000 | 365,000 |

## Department 1

Department 2
Machine Hours:

Engine A
Engine $B$
Total

| 10,000 | 10,000 |
| ---: | ---: |
| 160,000 | 40,000 |
| 170,000 | 50,000 |

## Departmental Data

Department 1 Department 2
Overhead costs:

Setup costs
Inspection costs
Power
Maintenance
Total

| $\$$ | 90,000 | $\$$ | 90,000 |
| ---: | ---: | ---: | ---: |
|  | 70,000 |  | 70,000 |
|  | 100,000 |  | 60,000 |
|  | 80,000 |  | 100,000 |
| $\$$ | 340,000 | $\$$ | 320,000 |
