

**McGill University, Faculty of Engineering**  
**Course ECSE-305A: Probability and Random Signals I**  
**Midterm Examination #2, Fall 2005**

**Date and time:** Friday, November 11, 2005, 10:35 - 11:25

**Examiner:** Prof. B. Champagne and Y. Psaromiligkos

**Instructions:** This is a closed book examination: only the faculty standard calculator is allowed, NO crib sheet. Attempt all questions. **NOTE:** this exam spans 2 pages

- 1.** Assume that the amount of beer in beer bottles of a certain make is normally distributed 20 marks  
 with mean value 350ml.

- (a) If the beer maker is required to fill at least 95% of its bottles with 345ml or more, what is the largest allowable standard deviation for the amount of beer in a bottle.
- (b) Suppose we buy 10 cases of 24 beer bottles from this make, what is the probability that 2 bottles or more do not meet the above requirement.

- 2.** Consider a rectifier circuit with input/output characteristic given by the equation 20 marks

$$Y = \begin{cases} 0, & \text{when } X < 0 \\ X, & \text{when } 0 \leq X \leq 3 \\ 1, & \text{when } X > 3 \end{cases}$$

where  $X$  and  $Y$  denote the input and output voltages in volts, respectively. Assume that  $X$  is a RV with a standard normal distribution .

- (a) Find the CDF of  $Y$  and sketch it.
- (b) Find the PDF of  $Y$ .

- 3.** Let  $X$  be a random variable with a probability mass function (PMF) given by 20 marks

$$p(x) = \begin{cases} 0.25, & \text{when } x = 0 \text{ or } 2 \\ 0.5, & \text{when } x = 1 \end{cases}$$

- (a) Find the mean and the variance of  $X$  starting from their definitions.
- (b) Derive the characteristic function of  $X$ ,  $\psi(\omega)$ .
- (c) Find the mean and the variance of  $X$  using  $\psi(\omega)$ .

**Appendix:** Table of values of the standard normal CDF

$x$	.00	.01	.02	.03	.04	.05	.06	.07	.08	.09
