# McGill University, Faculty of Engineering <br> Course ECSE-305A: Probability and Random Signals I 

Midterm Examination \#1, Fall 2006

Date and time: Friday, November 10, 2006, 10:35-11:25
Examiner: Profs. B. Champagne and Y. Psaromiligkos
Instructions: This is a closed book examination: only the faculty standard calculator is allowed, NO crib sheet. Attempt all questions.
NOTE: This exam spans 2 pages

1. The CDF of random variable $X$ is given by

$$
F(x)= \begin{cases}a, & x<-1 \\ b x+c, & -1<x<0 \\ b x+d, & 0<x<1 \\ e, & x>1\end{cases}
$$

where $a, b, c, d$ and $e$ are unspecified constants. It is also known that $P(|X|=1)=0$ and $P(X=0)=1 / 3$.
(a) Find the constant values $a, b, c, d$ and $e$ and sketch the graph of $F(x)$.
(b) Show that $X$ is a mixed RV. That is, identify the 4 components entering the definition of a mixed RV as seen in class.
(c) Find the PDF of $X$ and sketch its graph.
2. Assume that the temperature $T$ measured in ${ }^{\circ} C$ (degrees Celsius) at noon time in Montreal during the month of April is a normal (Gaussian) random variable. Further, it is known that: (i) $P\left(T \geq 5^{\circ} C\right)=0.5$ (ii) $P\left(T \geq 10^{\circ} C\right)=0.3085$.
(a) Find the mean and the variance of $T$.
(b) What is the probability that $T$ is between $-5^{\circ} C$ and $0^{\circ} C$ ?
(c) What is the mean and variance of the temperature at noon time in Montreal during the month of April measured in degrees Fahrenheit? NOTE: If $T_{c}$ is the temperature in Celsius then the corresponding temperature in Fahrenheit is $T_{f}=\frac{9}{5} T_{c}+32$.
3. Let $X$, the lifetime in years of a spark plug, be an exponential RV with mean 5 years.
(a) What is the probability that a spark plug will fail in less than one year?
(b) A mechanic buys a box of 20 spark plugs. What is the expected number of spark plugs that will still work after a year? Assume that a spark plug fails independently of the others.
(c) Find the PMF of $Y=\lceil X\rceil$ i.e., $Y$ is the smallest integer greater than or equal to $X$.

Appendix: Table of values of the standard normal CDF
